

Medical Terminology Reflection

I have had some experience in the past with medical terminology, but this was even more in depth, and some might say a master class on terminology. Looking back at these modules, and all coursework and SEL's, the most challenging part was remembering the terminology on the spot when talking with healthcare professionals who have been in their career for many years. This module did however, put the principles into place, and helped me build off it throughout each course. As with most of my work when it comes to knowledge and bringing everything together, I had to review this several times to completely understand the concepts. I included these modules because it helps illustrate my learning process and all that I learned from medical terminology and let you peak into how I used these modules in all remaining courses throughout this program. Overall, I enjoyed these modules and even though this was a quick module, but it will help me immensely, in life and when I am in my future career.
